L4: Entry 38 of 39

File: USPT

Nov 12, 1996

DOCUMENT-IDENTIFIER: US 5574828 A

TITLE: Expert system for generating guideline-based information tools

Brief Summary Text (17):

It is therefore an object of the present invention to provide a system which is efficient and effective at processing large quantities of data according to guidelines in order to generate an application program of questions to be administered to a data subject, the questions being based on a subset of the original guidelines such that the application program will in turn provide a next course of action suggestion based on the guidelines.

Brief Summary Text (18):

It is also an object of the present invention to provide a system which is efficient and effective at processing large quantities of data according to guidelines in order to generate an application program of questions to be administered to a data subject, the questions being based on a subset of the original guidelines such that the application program will in turn provide a qualification decision based on the guidelines.

Detailed Description Text (51):

The system of the present invention generates software for the hand-held computer on a PCMCIA RAM memory card. It also generates software for use on Windows or Pen-Windows devices. The real power of the system is realized when application programs are pilot tested in clinical settings. Using a portable computer, the system can customize or correct questionnaires, algorithms, and feedback reports and can generate new program code for immediate use in the field.

Detailed Description Text (156):

If the user opts to change the heading 823, the system performs an Edit Feedback routine 835. The Display Edit Feedback routine brings up a Feedback Editor window 837 that displays a number of items. The window displays a heading 838, as well as a priority rating 839, a frequency 840, a note feedback 841, a note feedback format group 842, a footnote 843, a footnote feedback format group 844, an ICD code 845, a CPT code 846, and OK and Cancel pushbuttons 847, where applicable. Control is then returned to the call routine 848. The user then enters the revised heading 849. The system asks whether the changes are to be saved 850. If not, control is returned to the Feedback Editor window 851. If so, the heading display is changed to the revised heading 852 and control is returned to the Feedback Editor window 851.

Detailed Description Text (164):

If the user opts to change the ICD code 831, the system performs the Edit Feedback routine 888 previously described. Control is then returned to the call routine 848. The system then displays the ICD Code pop-up list 889. The user selects a revised ICD code 890, and the system changes the ICD code field to the revised code 891, displays 892 the revised ICD code, and returns control 893 to the Feedback Editor window.

Detailed Description Text (165):

If the user opts to change the CPT code 832, the system performs the Edit Feedback routine 894 previously described. Control is then returned to the call routine 848.
